**About the Book**  
 This textbook introduces the lucid understanding of the scope of pharmacognosy and phytochemistry. This book includes the detailed review on primary and secondary plant metabolites.  
 Chapter 1 introduces primary and secondary metabolites. Chapter 2 gives complete pharmacognostic scheme for study of crude drugs. Chapter 3 and 4 include various drugs derived from primary and secondary metabolites, respectively.

**About the Author**  

**Mr. Sandesh Rangnath Woyal**, presently working as Assistant Professor at Pharmacognosy at JSPM's Charak College of Pharmacy & Research, Wagholi, Pune since from 29<sup>th</sup> July 2009. Previously, he completed his Post-Graduation from Mumbai University. Now he is pursuing Ph.D in Pharmaceutical Sciences in PRIST University, Tamil Nadu, India. He has total 8 years experience of teaching. He has published seven research articles in the renowned national and international journals of Pharmacy. He has attended many National and International Workshops and Conferences. His areas of interest are isolation and purification of phyto-constituents, separation and characterisation of components of mixture, Polyherbal formulation development and stability, animal and toxicological studies of herbal formulations.

**ABSTRACT**

The purpose of this research is directed towards the synthesis and evaluation of novel agents for the treatment of a variety of neurological disorders. In the past, the phenothiazine nucleus has been thoroughly investigated for various biological activities. The oxadiazole substituted phenothiazine has piqued interest as a potential treatment for a variety of neurological disorders. In light of these findings, researchers attempted to synthesise substituted phenothiazine and test them for anticonvulsant activity. Strychnine and 4-aminopyridine mediated models were used to test the anticonvulsant efficacy of synthesised compounds. These compounds can be used for ligand based drug designing purpose by which exact molecular mechanism responsible for showing anti-convulsant effect can be explored in future.

*Keywords: Anticonvulsant activity; strychnine induced model; thiosemicarbazide induced model; 4-amino pyridine induced model; neurotoxicity screening.*

**1. INTRODUCTION**

A convulsion is a medical disorder in which the body's muscles contract and relax quickly and regularly, causing the body to shake uncontrollably. Since a convulsion is often a symptom of an epileptic seizure, it is often used interchangeably with seizures [1-3]. However, not all epileptic seizures cause convulsions, and epileptic seizures do not always cause convulsions. Electric shock and improper Enriched Air scuba diving can also cause convulsions [4]. When nerve cells in the brain
